Experience

Freelance (Real-Estate Marketplace Client) July 2026 – Present

Backend Engineer

- Designed geo-ranked property discovery in NestJS and PostgreSQL (Sequelize) using Haversine ranking with a bounding-box prefilter and composite/geo indexes, replacing full-table scans on the hottest query.
- Integrated Razorpay payments with HMAC webhook verification on the raw request body; found and fixed an idempotency bug where a redelivered webhook reset an approved vendor to pending.
- Fixed concurrency issues across the API: a partial unique index with a 409 response stopped double-booked visit slots, and conditional updates made the offer-expiry cron safe to run across multiple replicas.
- Built a media upload pipeline (presigned uploads, WebP variant generation, scheduled orphan sweeper) on AWS S3 and CloudFront, and fixed a read-path issue that removed about 10× media over-fetch.
- Built CI/CD with GitHub Actions and Docker that deploys to AWS EC2 without SSH access; the rollout runs migrations, checks health and auto-rolls back on failure.

Wisflux Tech Labs, Jaipur August 2024 – June 2026

Full Stack Developer (Backend Focus)

- Developed and maintained production features for **GSA Inc.**, a Massachusetts-based U.S. client, delivering scalable backend solutions tailored to their operational workflows.
- Designed and implemented a real-time collaboration system using NestJS and Socket.IO with Redis Pub/Sub, enabling concurrent editing, user presence tracking, live data synchronization, and room-based broadcasting across distributed clients.
- Implemented distributed locking using Redis with heartbeat-based lock extension, preventing concurrent execution of critical workflows across services.
- Designed an event-driven data pipeline and asynchronous audit logging system using PostgreSQL triggers and Kafka, ensuring zero transactional latency impact and near real-time analytics.
- Implemented fault-tolerant pipelines using retry mechanisms, circuit breakers, and Dead Letter Queues (DLQ) to ensure reliability and data consistency.
- Built full-stack features for reviewing and correcting LLM-extracted data, improving accuracy in AI-driven bid processing workflows.
- Optimized REST API performance by redesigning data-fetching strategies, implementing indexed queries, summary endpoints, and lazy loading, reducing payload size from 1.4MB to 10KB and improving response times by 50–90%.
- Built a high-performance Project Metrics API using NestJS and Sequelize, replacing client-side aggregations with optimized SQL queries (SUM, CASE, ARRAY_AGG), reducing payload size by 95% and eliminating UI thread blocking.

Wisflux Tech Labs, Jaipur April 2024 – July 2024

Software Development Intern (Full Stack)

- Contributed to **Kira**, a browser-based SPA for hospitality project management, improving team transparency through end-to-end feature development.
- Built and enhanced production features across Angular, NestJS, and PostgreSQL, resolving bugs and strengthening full-stack proficiency in an agile environment.

Technical Skills

Languages: TypeScript, JavaScript, SQL **Backend:** Node.js, NestJS, Express.js, REST APIs, Microservices
Frontend: Angular, HTML, CSS, RxJS **Databases:** PostgreSQL, Sequelize
Messaging & Caching: Apache Kafka, Redis, Redis Pub/Sub **Real-Time:** WebSockets, Socket.IO, Server-Sent Events
Cloud & DevOps: AWS, Docker, Nginx **Tools:** Git, GitHub, Visual Studio Code, Cursor, Claude Code

Education

Swami Keshvanand Institute of Technology, M&G, Jaipur 2020 - 2024

B.Tech - Information Technology *CGPA: 8.4*
